

Project Description..

Using React, Node.js, Express & MongoDB I will learn how to build a Full Stack MERN Application - from start to finish. The App is called "Memories" and it is a simple social media app that allows users to post interesting events that happened in their lives. You can their also Login Signup form seen. Also I have use thein in authentication .

You can also their add video and delete .. also you can create some video application...I have use there in mongodb server. And last I have use Heroku and Netlyfy platform to hosting the website...
